Condition: New. Publisher/Verlag: Wiley-VCH | Modern Atomistic Simulation Methods for Engineers | In-vitro Materials Design provides an overview of the latest computational materials science methods on an atomic scale, covering real-life applications taken from concrete projects that range from tribology modeling to performance optimization of integrated circuits. | An overview of the latest computational materials science methods on an atomic scale. The authors present the physical and mathematical background in sufficient detail for this highly current and important topic, but without unnecessary complications. They focus on approaches with industrial relevance, covering real-life applications taken from concrete projects that range from tribology modeling to performance optimization of integrated circuits. Following an introduction to the fundamentals, the book describes the most relevant approaches, covering such classical simulation methods as simple and reactive force field methods, as well as highly accurate quantum-mechanical methods ranging from density-functional theory to Hartree-Fock and beyond. A review of the increasingly important multiscale approaches rounds off this section. The last section demonstrates and illustrates the capabilities of the methods previously described using recent real-life examples of industrial applications. As a result, readers gain a heightened user awareness, since the authors clearly state the conditions of applicability for the respective modeling methods so as to avoid fatal mistakes. | Preface IXPart I Basic Physical and Mathematical Principles 11 Introduction 32 Newtonian Mechanics and Thermodynamics 52.1 Equation of Motion 52.2 Energy Conservation 72.3 Many Body Systems 102.4 Thermodynamics 113 Operators and Fourier Transformations 173.1 Complex Numbers 173.2 Operators 183.3 Fourier Transformation 204 Quantum Mechanical Concepts 254.1 Heuristic Derivation 254.2 Stationary Schrödinger Equation 274.3 Expectation Value and Uncertainty Principle 285 Chemical Properties and Quantum Theory 335.1 Atomic Model 335.2 Molecular Orbital Theory 396 Crystal Symmetry and Bravais Lattice 476.1 Symmetry in Nature 476.2 Symmetry in Molecules 476.3 Symmetry in Crystals 496.4 Bloch Theorem and...
