EVALUATION OF NUTRIENTS OF GAMMA RADIATED GARLIC TO IMPROVE ITS EXPORT

[DOWNLOAD](#)

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Garlic (*Allium sativum*) is perennial with underground head known as bulbs and pungent bulblets known as cloves belonging to the genus *Allium* which is the second most cultivated vegetable after onion. Garlic is valued for its aroma and flavor. Garlic has a wide spectrum of measures like antibacterial, antiviral, antifungal and antiprotozoal. Under storage conditions garlic is susceptible to contamination by microbes and it undergoes sprouting phase. To overcome this problem gamma irradiation is suggested as a method to ensure food safety. The low dose irradiation level does not affect the garlic properties and provide longer shelf life against microbes attack. Garlic irradiated at 0.5kGy shows no change in the proximate composition as well as on the sensory properties. Therefore, the recommended dosage for the conservation of garlic is 0.5kGy. Irradiation at 0.5kGy on garlic sample has no negative effect on the nutritional quality of food, so irradiation at low dose is a promising technique to enhance the shelf life of garlic. | Format: Paperback | Language/Sprache: english | 68 pp.
