RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 80 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1987 Excerpt: . . . size as much as 175 mm in diameter. The subglobose spinose forms accentuate the ornament, but attain only a relatively small size; maximum as much as 90 mm in diameter. There appears to be an inverse relation between maximum size on the one hand and degree of stoutness and strength of ornamentation on the other. The suture line is relatively simple, with the first lateral lobe a little larger than the ventral lobe and asymmetrical and four to six much smaller and rather narrow additional lobes between it and the line of involution. The dorsal suture contains four slender lobes on each side of the dorsal lobe. The most distinctive characters are the nodose or spinose ornament, particularly on the midline of the venter, and the forward arching of the ribs on the venter. In this paper five species of *Neogastropites* are recognized, each containing infrasubspecific variants: *haasi* Reeside and Cobban, with six described variants; *cornutux* (Whiteaves), with seven described variants; *muelleri* Reeside and Cobban, with seven described variants; *americanus* (Reeside and Weymouth), with Figure 10. --Average number of ribs per whorl of species and variants of *Neogastroplitei* (dot) and extreme range of rib counts (solid line). Rectangles enclose the most abundant variants. five described variants; and *maclearni* Reeside and Cobban, with five described variants. The species *N. selwyni* McLearn (1933, p. 24) may be identical with A7, *haasi*. but the writers feel it better to leave the question open at this time. Type specimens. --Buchicerast...
